

CHATBOT HACKATHON

METI UniPods AI Innovation Programme, Cohort 1

We are launching a hackathon to solve a real challenge we are facing right now, with a \$5,000 cash prize. Your solution will be deployed to solve the challenge.

The Problem

Our group has grown large, and it has become hard to keep up with every message. Due to high chat traffic people miss messages and end up asking questions that have already been addressed. People are busy and miss group meetings and cannot rewatch the call recordings. As a result, information gets lost across chats and calls.

The Challenge

Build a chatbot that makes sense of all this data, calls, chats, and more, and responds to people directly, so the group stays informed and connected despite the volume.

What to Submit

- A working chatbot, not just a slide deck or a mockup.
- Access to the source code or repository.
- Short setup notes so anyone can run and maintain it.

Team Guidelines

- Teams of up to 5 people.
- Team members cannot all be from the same country.
- Each team must include at least one woman.
- Announce your team's name and members by close of business, Thursday 17 September 2026.

Timeline

- Team declarations due: close of business, Thursday 17 September 2026. Team lead should email with Subject: UniPods Hackathon. Please indicate team members and country of origins.
- Hackathon runs: Friday 18 September to Thursday 24 September 2026.

\$5,000 CASH PRIZE

Judging will be done by the whole group. More info on judging to follow
